

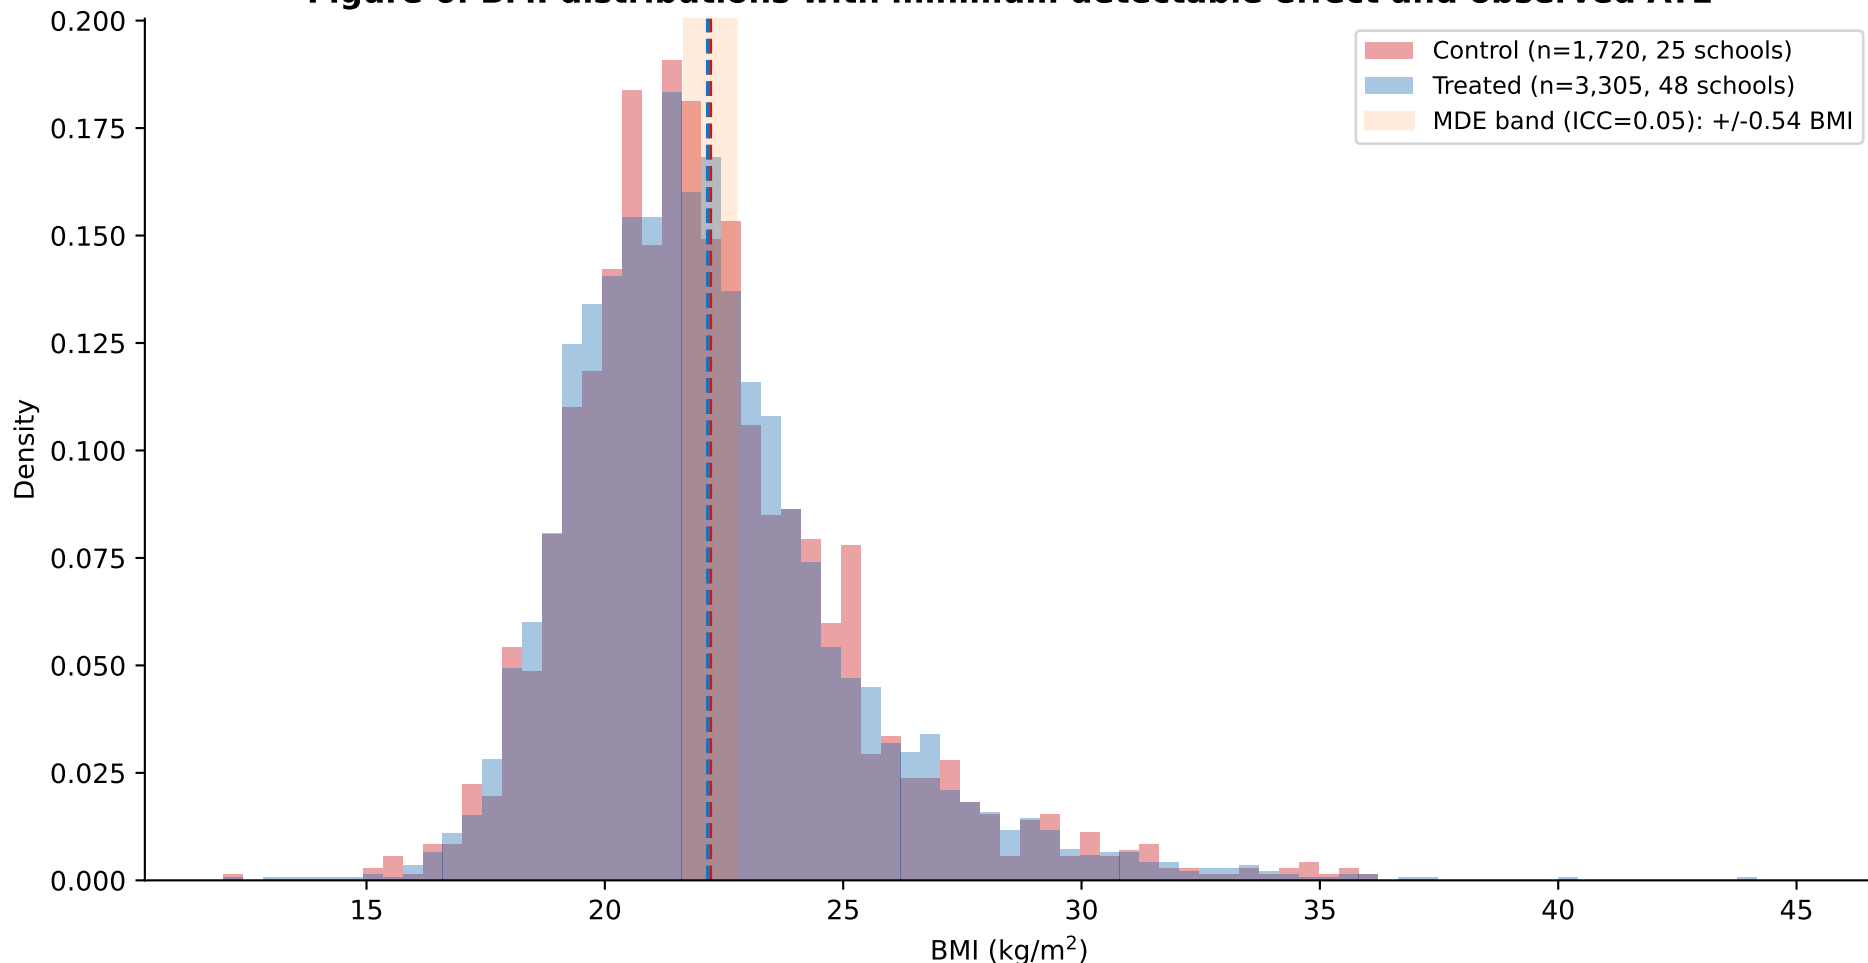

Figure 6: BMI distributions with minimum detectable effect and observed ATE

Unbalanced CRT: $K_1=48$ treated schools, $K_0=25$ control schools. Average cluster size: 69 (treated), 69 (control).

Observed ATE = -0.19 BMI points. MDE at 80% power (t-dist, df=71):

ICC Observed (0.023): 0.41 BMI (0.14 SD)

ICC Conservative (0.05): 0.54 BMI (0.18 SD)

ICC Very conservative (0.08): 0.66 BMI (0.21 SD)
